Orbital Dual-action that deep cleans and restores all floors

ORBOT machines are like the “Swiss Army Knife” of cleaning machines. Our patented drive system combines two motions in one (orbital & rotational) to clean any floor.

This powerful vibration generates an increased level of agitation delivering superior results in all professional cleaning, scrubbing, grinding, stripping and polishing applications.

Saving Factors with Increased vibration efficiency

- ORBOT's high-performance orbital system allows for complete restoration on multiple floor types
- DUAL-ACTION ORBITAL POWER makes cleaning faster, easier and safer
- SAVES time, water, labor and effort. Plus, chemicals and temperature can be reduced or even eliminated

ORBOT

Affordably Smooth

Feel the good vibrations with ORBOT Vibe

The ORBOT Vibe is a unique and versatile floor cleaning machine. Differing from rotary single disc models, the Vibe offers our patented drive system that combines two mechanical movements in one – orbital and rotational; proving its results on all floor surfaces.

The ORBOT Vibe has been designed with a quick change pad system to easily change from cleaning, stripping, or restoring any floor. No need to purchase multiple machines to handle different jobs. Save yourself time and money by owning one machine that does it all.

The dual action orbital technology used by the ORBOT Vibe generates maximum agitation and vibration, providing superior results and floor care without damaging the floor surface.

The ORBOT Vibe is a true low-moisture machine. The amount of solution can be controlled at your fingertips with its 15.1 liters on-board solution tank and fixed spray system, making the ORBOT Vibe one of most cost effective and versatile floor machines on the market.

The ORBOT Vibe combines our Orbital Technology with an on-board solution tank and fixed spray system to easily clean, strip, or restore any floor. The one machine that does it all, the ORBOT Vibe is low maintenance, easy to use and reduces labor costs.

Relentless Pursuit

Keep the job moving with ORBOT SprayBorg

The ORBOT SprayBorg is our premium multi-surface cleaning and restoration machine. Our patented drive system produces 2 independent movements, thousands of micro circles moving at 1725 RPM in addition to the entire driver rotating at 80 RPM. These actions create the most agitation of any floor cleaning method to date. Our technology transfers this energy towards the floor in the form of vibration, essentially shaking loose the bond that attaches dirt to the floor surface.

ORBITAL TECHNOLOGY

Each contact point makes 0.9525 cm diameter orbital movements at 1725 rotations per minute.

QUICK CHANGE CARTRIDGE SYSTEM

The Orbot utilizes a unique quick change solution cartridge system. Three cartridges are supplied with the machine and are designed to quickly slide into the holder. Each 11.4 L cartridge can clean approximately 90 sq m on carpet and 370 sq m on hard floors. Built in anti-vibration technology eliminates noise and vibration transferring to the user. Proper use of the Quick Change System can reduce refill times by 15 minutes per hour.

Roam Free

Cut the cord with ORBOT LiFe

The ORBOT LiFe is the most versatile lithium-ion battery powered, dual action orbital floor machine. It has been designed with the safest and latest innovation in lithium-ion battery technology, which means, you can freely and quickly deep clean your floor throughout the facility at any time of the day with no boundaries or concern for power outlets and trip hazards.

The ORBOT LiFe guarantees a longer lasting battery life of up to 3500 cycles. It has all the benefits of the ORBOT SprayBorg but with the added convenience, flexibility, and portability of a battery.

FAST CHARGE

No need to wait long hours to charge the ORBOT LiFe, increase productivity with 120 minutes of charge time.

HYBRID FEATURE

Thanks to our advanced engineered Hybrid feature of both on and off-board charging, the ORBOT LiFe can continue cleaning when the battery is low by simply plugging the power cord into a wall socket. While in motion, the ORBOT LiFe continues to charge so you can finish your work. When you're ready to explore without boundaries, just leave the cord behind.

BATTERY MANAGEMENT SYSTEM (BMS)

For added safety and durability we've added a battery management system to protect the battery from being discharged and/or overcharged.

Stay charged with the Discover Bluetooth® App that gives real-time access to battery State of Charge, voltage, operating current, temperature, and other operating information.

Slender Yet Mighty

Pack a compact punch with ORBOT SLiM

The ORBOT SLiM is designed for the consumer market specifically for small spaces such as bathrooms, hallways, and kitchens. It can easily fit under furniture for tough to reach areas. Its light weight structure is strong and capable of the powerful agitation that delivers superior results in all professional deep cleaning.

The ORBOT SLiM is a true low-moisture machine. It combines our Orbital Technology with a 2,84 Liter on-board solution tank and fixed spray system that cleans, strips, or restores any floor.

And there's no need to purchase multiple machines to handle different jobs because the ORBOT SLiM has a quick change pad system, making this machine one of the most cost effective and versatile floor machines on the market.

The ORBOT SLiM is very low maintenance, easy to use, and reduces labor costs. Save yourself time and money by owning one machine that does it all.

For a complete, deep down clean

ENVIRON HP is our exclusive green Encapsulation Cleaner (Highly Concentrated) that assists in making the ORBOT system complete.

When you combine the ENVIRON HP green cleaner with our exclusive orbital drive technology and accessory pads, you will attain tremendous soil extraction, fast dry times, no reoccurring stains and a healthier environment for homes and commercial settings.

How Environ HP Works with Orbital Drive Technology

The orbital drive of the ORBOT generates hundreds of small oscillations that spin at roughly 1725 revolutions per minute. This orbital drive pattern allows for all sides of the carpet fibers to be agitated and therefore all of the soil will be effectively removed from the carpet fiber.

To ensure that the agitated soil will not stick to the carpet fiber again, a polymer is needed to trap and encapsulate these soil particles. The polymer element in ENVIRON HP will form distinct crystals when it dries. These crystals are the principle vehicles that stop wicking or the reoccurring of stains. They also enable the soil particles to be extracted through post-vacuuming while keeping carpets cleaner for longer periods of time.

Encapsulating polymers combined with an organic soil releaser and enhanced with the cleaning power of hydrogen peroxide.

Cleans up to 1100 m2 with the ORBOT Method.

Makes up to 120 liters.

ORBOT

The ORBOT Method uses 95% less water than traditional carpet cleaning methods

ORBOT's dual-action technology ORBOT's unique low-moisture system uses 10 times less the amount of water opposed to other water extraction methods. The power mopping ability of SuperZorb pads means over-wet carpets that harvest mold and mildew will never be an issue. And the agitating ability of AgiClean pads remove soil seep down and eliminates stains and bacteria growth. With drying times reduced exponentially, cleaned areas can be reopened to foot traffic sooner and customer spaces can be accessible earlier. The ORBOT method is gentle on fibers which significantly preserves the life of the carpet.

TRADITIONAL METHOD

Standard carpet cleaning methods create problems

- Substandard results
- Mold and bacteria growth
- Slip and fall accidents
- Damages carpet fibers
- Poor indoor air quality
- Carpet wrinkles
- Voided carpet warranties
- Wet carpets
- Reduced carpet life
- Long dry times
- Recurring stains
- Color fading

ORBOT METHOD

ORBOT carpet cleaning methods solve problems

The ORBOT method eliminates all traditional method problems. Our patented vibration extraction technology provides the safest, fastest and most efficient type of deep cleaning available.

The ORBOT Method cleans fast and effectively

The development of dark, nasty mildew found in grout lines in wet environments is inevitable. Traditionally, small specialty grout brushes are used to clean these surfaces. Unfortunately, porous tile and filthy grout lines are notoriously difficult and tedious to clean once dirt has settled into grout lines or tiny crevices of tile.

The ORBOT Method achieves unparalleled cleaning results on tile and grout by combining our machines patented technology with our multi-surface brush. The secret behind our brush system and its unique design is the bristles varying lengths and diameters. The short, thicker bristles clean top surfaces, while the medium length bristles reach into stubborn crevices and pores. The longer, angled bristles located around the outer edge of the brush are specifically developed to clean hard to reach areas such as along edges and around obstacles. This system negates the use of excessive water and harsh chemicals.

TRADITIONAL METHOD

Standard tile & grout cleaning methods create problems

- Grout lines along edges of walls cannot be reached
- Multiple passes required to penetrate grout lines
- Crevices, cracks and pores are difficult to clean
- Harsh chemicals required to achieve results
- Brush bristles do not reach deep grout lines
- Labor intensive

ORBOT METHOD

Your local distributor:

The ORBOT Method uses no harsh chemicals

Concrete is a very malleable yet durable material for both interior and exterior flooring surfaces. It is also very porous so it must be cleaned regularly to prevent mold and dirt buildup. Traditionally, concrete is cleaned with harsh chemicals or by pressure washing. With excessive water pressure, the resulting momentum is great enough to dislodge not only dirt and debris but can cause spalling such as peels, flakes and popouts.

The ORBOT Method combines our dual action orbital machines with a weight kit and our specialized concrete brush to remove heavy soil from porous concrete. The mechanical action of the ORBOT allows the concrete brush to work more effectively with less water. The hardened bristles of our concrete brush are tough enough to agitate hard surfaces without damaging it, and without the haphazards of extreme water pressure.

TRADITIONAL METHOD

Standard concrete cleaning methods create problems

- Cleaning without excessive chemicals & water
- Greasy & slippery floors
- Mineral deposits
- Mold growth

ORBOT METHOD

ORBOT concrete cleaning methods solve problems

The ORBOT method provides an environmentally preferred form of removing soil & grease with minimal water & chemical use. When combining ORBOT's patented orbital technology with our concrete brushes & pads, the hard to reach pores, cracks & crevices are easily cleaned and maintained.

Your local distributor:

The ORBOT Method achieves complete floor restoration and reconditioning

Traditionally, refinishing and resurfacing stone involves the use of harsh chemicals to increase reflective properties of the stone. However, the chemical method cannot remove scratches or lippage and if used improperly or for extended periods of time, stone quality can diminish. Another method for stone refinishing, which focuses on using coatings, adds even more maintenance and eventually loses its effectiveness, requiring the stripping of these coatings.

The ORBOT 'StoneFlash Pad' Method is part of a 5-step chemical-free system for grinding, honing and polishing marble, terrazzo, travertine, limestone and more. Our 5-step complete restoration kit includes pads of various grit, allowing for a more precise execution of floor refinishing without the use of harsh chemicals. For light retouching, we also offer our maintenance package, which is steps 3-5 of the complete kit, perfect light scratches or simply the need for a gloss boost.

TRADITIONAL METHOD

Standard stone cleaning methods create problems

- Consistency
- Long lasting shine
- Labor intensive
- Orange peel effect
- Wavy reflections
- Messy cleanups
- Etching damage
- Extensive professional training
- Calcium deficient stone

ORBOT METHOD

ORBOT stone cleaning methods solve problems

The StoneFlash Pad system allows any operator to achieve superior results without the use of chemicals, polishing compounds and steel wool pads. This user friendly system allows unskilled operators the ability to grind, hone and polish like a true professional.

Achieve consistent color, depth and factory finish results on marble, limestone, travertine and terrazzo.

Your local distributor:

Instructions for restoration

- Install weight kit onto ORBOT machine (LiFE, SprayBorg & Vibe, not necessary on the SLiM machine).
- Fill bottle cartridge with water.
- Add appropriate pad.
- Move the machine forward and back, making at least 5 passes forward and 5 passes backwards, at 1 foot per second.
Tip: Overlap passes to avoid missing areas on the floor.
- Repeat the forward and back motion for all steps 1-5.
Tip: The more passes made with steps 1-2, the better the results will be in the end when polishing with steps 4-5.
- Always rinse the floors and vacuum between steps. Debris left behind from previous steps will result in scratching and a lower grade of gloss finish.

STEP 1 Pad - Removal of deep scratches and to resurface the stone flooring. Step 1 is the most important step to achieve the best results. Step 1 will grind the floor down and allow for steps 2-5 to achieve a high gloss result.

STEP 2 Pad - Removal of medium scratches.

STEP 3 Pad - Honing step, prepares floor to achieve a glossy finish.

STEP 4-5 Pads - Polishing pads. Customers can choose which gloss level is satisfactory by finishing after step 4 or 5.

Tip: Step 5 will produce the highest gloss, color depth, and clarity, and is used for daily maintenance.

The ORBOT Method achieves complete floor restoration and reconditioning

Microporous flooring can be difficult to clean by traditional means. Deeply penetrated dirt and grease in specialized ceramic, composite and porcelain flooring can be problematic.

The ORBOT method is one of the only systems that can actually pull the dirt from porous floors. Using our specialized open-cell UltraLift pad, the orbital drive motion of our ORBOT machines when combined with the UltraLift pad create a suction effect. Easily lift away grease and dirt while simultaneously scrubbing away surface stains and stubborn black marks, with the majority of situations only requiring the use of water. UltraLift pad can be used on vinyl, linoleum, stone, ceramic, porcelain, wood, smooth concrete and any other types of smooth surface.

TRADITIONAL METHOD

Microporous flooring can be problematic

Dirt & grease can deeply penetrate specialized hard floors making it quite difficult to lift.

- Ceramic tile
- Epoxy
- Composite
- Porcelain

ORBOT METHOD

The ORBOT system actually lifts dirt from porous floors

Our orbital drive machines combined with our specialized UltraLift pad creates a suction effect simultaneously scrubbing surface stains and stubborn black marks mainly requiring only water.

The ORBOT Method saves time, labor, and expenses

Traditionally, stripping and maintaining Wood and VCT/Vinyl floors usually requires the use of harsh chemical stripping agents. Many hours of manual labor is needed to emulsify old floor finish and remove it. This slippery mixture can create a slip and fall hazard for the workers. Once the mixture is removed, the floor surface must be rinsed with a neutralizing agent before reapplying multiple layers of floor finish.

Our ORBOT Method is ideal for stripping, sanding, scrubbing, restoring and cleaning coated flooring or decking. The mechanical action, free floating driver design eliminates swirl marks and gouges that traditional machines leave behind. Benefits: reduction of slip and fall accidents, up to 70% less water usage, no user exposure to harsh stripping chemicals and no chemical cleanup around baseboards or nearby areas.

TRADITIONAL METHOD

Stripping floor coatings can cause problems

- Need for vacuum & ventilation systems
- Use of masks, boots & safety equipment
- Toxic indoor air quality
- Slip and fall accidents
- Labor intensive process
- Damages floor surfaces

ORBOT METHOD

Stripping floor coatings with the ORBOT method is hassle free

Our innovative free floating orbital head technology, low moisture spray system and specially designed pads provide a chemical and hazard free solution to floor care.

BATTERIES

Correct Use, Upgrade & Sleep Mode

ORBOT

Quick Instructions for Correct Use of Li-Ion Batteries

1. BEFORE USING A NEW MACHINE:

Fully recharge the battery 90 minutes.

The batteries (on machines & spare) are very low charged for safety reasons. Most times with those low charged batteries, the machine will not start working unless first fully charged (41,5V).

2. AFTER USE:

Always recharge battery (Leave on charger until green light flashes).

If left discharged, the self-discharge will continue at a dangerous level. The machines electronic board will turn off at 32V. At 29V the battery will go into sleep mode at 20V. Battery in this condition needs to be fully recharged (90 minutes). The charger wakes up the battery to a minimum 20V.

3. IF MACHINE STOPS DUE TO LOW BATTERY:

Always remove battery and recharge (Leave battery on charger approximately 90 minutes until green light is flashing).

If the battery is left in the machine with the switch ON, the discharge will be very fast due to the lights and electronic board.

4. STORAGE:

FULLY charged battery (41,5V) can stay (in stock) at +50°F to +68°F (+10°C to +20°C) for a maximum of 2 years.

DISCHARGED battery (32V) can stay (in stock) at +50°F to +68°F (+10°C to +20°C) for a maximum of 6 months. Always recharge batteries before use.

5. VOLTAGE

BETWEEN 16V-20V: Battery ONLY to be reactivated by Lindhaus.

UNDER 15V: battery permanently damaged & cannot be recharged.

These 5 important points will prevent almost any battery damage

Quick Instructions for Restarting Li-Ion Batteries from Sleep Mode

When Li-Ion battery is low charged (left discharged a long time), goes to sleep mode, measuring the contacts + -, deliver very low voltage (under 17V DC).

TO REACTIVATE THE BATTERY:

1. Make sure battery is cold - ambient temperature.
2. Unscrew 4 screws holding together upper & lower covers.
3. Open the battery and remove the complete cells from BMS circuit board, all connected.
4. Connect, for 1 second, the + pole of the battery to the free pin of the battery connector using the ORBOT red cable with resistor (80Ω K to $100\text{ K}\Omega$).

AFTER USE - ALWAYS RECHARGE THE BATTERY:

1. Leave battery on charger until green light is flashing.
2. If left discharged, the self-discharge will continue to discharge to a dangerous level.

For Specialized ORBOT Dealers Only

NOTE: Batteries and chargers produced from January 2018 do not require this procedure to wake up the battery. One the battery is connected to the ORBOT charger, the wake up procedure is automatic.
